

# Earthquake

## ACTION CHECKLIST

**During shaking, Drop, Cover and Hold On. Protect your head and neck beneath a sturdy table if nearby; stay indoors rather than running outside. If near the coast, strong or long shaking may mean tsunami danger: move inland and uphill once shaking stops.**

### [ ] **Protect yourself now**

Drop onto hands and knees and cover your head and neck. With a mobility device, lock wheels and protect your head.

### [ ] **Hold on**

Stay under sturdy cover until shaking ends. Keep away from windows and objects that can fall.

### [ ] **If outdoors or driving**

Move away from buildings and lines. Pull over safely clear of bridges, wires and trees and remain in the vehicle during shaking.

### [ ] **Check secondary hazards**

Expect aftershocks; avoid damaged structures and check for fire, gas leaks and tsunami warnings.

## WATCH FOR

Doorways are not generally the safest shelter. Do not use elevators after damaging shaking.

Updated 2026-10-02 | General guidance. Follow current local instructions. In immediate danger, contact emergency services.
