

Evacuation

ACTION CHECKLIST

Follow the evacuation order for your area. Leave early enough to use a safe route; take people, pets, medication, identification, phone and charger, keys, and a few essentials. Know where you are going, tell a contact, and do not take a closed or flooded road.

[] Confirm the order

Check the official zone, deadline, route, shelter options, and whether the order includes your address.

[] Gather people first

Account for everyone and pets. Take required medication and medical supplies, documents, accessible equipment, keys, and a charged phone. Do not spend critical time packing extras.

[] Choose a destination

Go to a trusted contact or designated shelter outside the hazard area. Check pet rules, accessibility, and transport needs.

[] Leave and report safely

Use current official routes. Share your destination with an out-of-area contact, keep fuel in the vehicle if relevant, and do not return until authorities say it is safe.

WATCH FOR

If a route is unsafe, do not force it. Follow current local instructions or contact emergency services for help. Some hazards, especially radiation fallout, can make immediate travel more dangerous than sheltering; follow the hazard-specific order.

Updated 2026-10-02 | General guidance. Follow current local instructions. In immediate danger, contact emergency services.
